

RAY2

Microwave link

Press release

15th September 2014

RAY2 - first class microwave link, (O2 Czech Republic a.s.)

RACOM is proud to announce that the microwave link **RAY2 has been chosen** by competitive tender as the standard solution for mobile operator **O2 Czech Republic a.s.** The tender was for **10, 17 and 24 GHz** free-band solution and RACOM products were chosen from among almost all world-renowned known producers seeking for the contract.

RACOM, represented in the tender by partner company **NHK**, met all the requirements of the demanding tests. The success was driven by the overall balanced performance parameters as summed up by **Martin Kralik, Customer Service Director of NHK**: *„The excellent RAY performance such as unique sensitivity and resistance to interference, extraordinary reliability together with advanced diagnostics were further improved by new Ray2 features including optical and metallic user interfaces, jumbo frame support and IP-TV optimized modem, broad range DC power option, etc.. All those features are a perfect fit to demanding customers of O2's caliber.“*

On winning the tender **Pavel Pejchal, product manager of RACOM said**: *„This success proves that the new features of RAY2 address the needs of telecommunication operators. The built-in versatility providing freedom of choice for interfaces and powering options is evidently more relevant for these customers, than extremely high-order modulation devices with questionable benefits in real-world conditions.“*

The tender was for more than **700 links** which will be commissioned **by 2016** with significant potential for **further growth**.
