

Omnidirectional Antennas KA380.3

The omnidirectional antenna KA380.3 is designed for base radiostations working in bands of 380-400 MHz. The antenna has a omnidirectional radiation pattern with the gain of 3 dBd and is suitable for the top-mounting. The antenna is broadband and that is why it is suitable for duplex operations.

As for construction, the antenna is designed as a coaxial dipol put in a laminate case. It is connected to the coaxial cable by the coaxial plug "N" type which is soled together with this antenna.

It is possible to order holders produced of zincplated steel for towers 'diameters of 30 to 180 mm.
